

How to Format your Input Data

Make sure you have only two variables in your data set:

- 1) “y”:: Your target dependent variable
- 2) “x1”: your independent variable

```
##           y      x1
## [1,] 105.2950 88.21513
## [2,] 105.8943 88.48415
## [3,] 106.6209 87.87684
## [4,] 106.1572 86.77954
## [5,] 101.2812 84.62243
## [6,] 101.4484 84.60650
```

Both variables should be in `as.numeric()` format. Note: if your data has other header names, you will have to change them to “y” and “x1”.
